o F	Radio code groups listed in the Combat Communications Orders are used to warn tanks; other personnel are warned by audible signals where possible. Higher units are warne PVO over wire circuits. PVO, which is a function of the MGB, controls the operation the search radar set assigned each division.
	•
8	Colored smoke rockets are sometimes employed for signalling during the daytime, but colored panels are much preferred because of their greater security. Smoke pots and are used to produce white or grey smoke for screening, but colored smoke is not avail in these forms.
	the locations large military radio stations
	(a) Minsk - very large radio station near Uruchye, 7 km NE Minsk on Minsk-Moscow Superhighway (53°56°N 27°41°E). do not know the number, type, size and configution of the antennas. Uruchye is a "military town" or contonment consisting of a number of four-story brick buildings.
	The Minsk-Moscow Superhighway
	Il m wide and is constructed of gravel covered with tar; during the summer the rebecomes so sticky as to pull the soles and heels off the boots of troops who mare along it.
- (	(b) Kiev - a large radio station is located opposite the Dnieper River from Kiev (50°26°N 30°41°E).
	(c) Leningrad - Radio receiver station located at Sosnovaya Polyana in the southwest suberbs of Leningrad (59°50°N 30°08°E). This area consists of two antenna fields each a little less than a kilometer square, with a building between them; equipm of an unknown type was housed in the building. Antennas are of the umbrella type with centers 30-40 m high. This station is heavily guarded, and it lies in a sec zone which borders the Gulf of Finland. The Communications School for the Soviet is in Leningrad on Soviet Avenue near the Smolensk Palace; it is a very large building, occupying an entire block.
ı	These animals are extensively used by border guard units, with dogs more widely used pigeons. Special schools exist for training these animals. Army troops also use the but to a lesser degree.

	SECRET.
	or herding prisoners (not PW's) or livestock across the mined area. In addition, there are mines which can be remotely detonated by means of wire lines or by radio.
27.	UNCODED Combat Communications Orders 25X
	are called either 60EBME 77FWKA3W CB93W (literally "Combat Orders, Communica"25X tions") or 60EBME PACTOP9xEHW9 CB93W (literally "Combat Directives, Communications").
28.	UNCODED wire communications coverage of the USSR 25X
	Approximately 10 - 15% of the minor government officials have telephones. Service is adequate for important personages and a bare minimum of traffic. Measured by Soviet standards, it fulfills its purpose. Communications within large cities are fair, except that portions of automatic telephone exchanges are often out of order. Outside of large cities, communications become progressively worse and are practically nil in rural areas.  25X1
29.	
	At present civil communications in the USSR are operated on a military basis, using military organization and techniques, so transition to military control would be superficial. In addition, the final control of all communications, both military and civil, is exercised by the MGB, so any shifting of responsibilities would merely be an administrative procedure.
<b>3</b> 0。	
	Both military and civil aircraft are under rigid PVO control at all times that they are in the air. The PVO is primarily concerned with the prevention of escape from the USSR
